

CAUTION – IMPORTANT SAFETY INSTRUCTIONS

- Surrey

- The brake lever is located next to the steering wheel. Please use the brake at all times when going downhill.
- For all people in the pedaling position - to avoid getting your feet caught between the pedals and frame – keep your feet on the pedals at all times while going forward. Do not rest your feet on any other part of the Surrey.
- For all people in the pedaling position - when backing up please put your feet on the ground away from the pedals & cranks, not on frame or chainguard and push backwards. The pedals will rotate backwards and can hit you in the shin or pinch your foot. This is the reason for this safety decal.

- Cruiser/Single-speed Bicycle

- These have pedal brakes which work by backpedaling. Please use the brake at all times when going downhill.
- Be cautious when turning on sand, gravel, or debris as your front wheel could slide out.

- Mountain/City Bicycles

- Shifting is simple – lower numbered gears make pedaling easier for uphill or headwinds, higher numbers give you more speed.
- The front brake is on the left. Be cautious using the front brake, when turning on sand, gravel, water or other debris; your front wheel could slide out.

- All Products

- Practice and become comfortable with the brakes before beginning your ride.
- No extra riders, no sidesaddle, no standing & no hanging on the outside.
- Obey all rules of the road, maintain safe speeds and watch for cars & pedestrians.
- We recommend helmets for all riders.
- Items in back pocket may fall out when pedaling.

Thank you for complying with all safety instructions.
